INDS Data Manager (IDM) 5.0.0 Windows Release

Date: June 3, 2026
Subject: Release of IDM 5.0.0 Windows Application on June 3, 2026
Delivery: INDS Website https://inds.epicinds.com
AIRAC Cycle: Navigation Database Cycle 2605, Charts Cycle 2612, and Subsequent

Dear Valued Customer,

We are pleased to announce the release of the IDM 5.0.0 Windows Application. It is now available for download through the INDS website by selecting 'Tools & Tech Info' from the 'Support' dropdown menu.

Upgrading to the newest version of the IDM application streamlines support and enhances the overall customer experience. The latest release introduces new functionalities, improved workflows, and a more intuitive interface, making IDM faster, smarter, and more efficient. **We strongly recommend upgrading to IDM 5.0.0 as soon as possible due to discontinued support for the previous version after June 20, 2026.**

This new version of the application (IDM 5.0.0) includes the following:

IDM 5.0.0 WIN	
New Features	**Improvements**
Introduced **Report Issue**, **Multiple Account Association**, **Offline PIN setting,** and **Activity Tracker** features.	Enhanced recommended size handling and implemented lightweight APIs.
Addressed EB Number mismatch for Tail in Downloads page.	Improved Quick Links, About page, and HUE settings across subset, downloads, and media functionalities.
Added **Favorites** functionality on the Downloads page for each Tail.	Updated Notification feature with revamp changes, documentation, and support updates.
Implemented controlled ordering of databases displayed for each Tail on the Subscription page.	Enhanced **Download ALL** functionality to allow downloading old and new cycle databases individually.
Enabled IDM to automatically delete logs older than 60 days from the PC/Device.	Provided customer information on deleted airports from databases, with availability noted in the Exception list.
Provided demo video links and made the new version available directly within the application.	***Honeywell Aerospace migration:*** *This update pertains to the API migration from Honeywell to Honeywell Aerospace.*

NOTE: Please refer to the FAQs for more details on the features and improvements introduced in IDM 5.0.0.

IDM 5.0.0 Frequently Asked Questions FAQs.pdf

Important Note: IDM 4.9.0 and earlier versions will remain supported until **June 20, 2026**. To ensure continued support and access to the latest features, it is mandatory for users to **upgrade to IDM 5.0.0** prior to this date. Please note that IDM 4.9.0 and earlier versions will no longer be operational after June 20, 2026.

Prerequisites for Upgrading to IDM 5.0.0.

To ensure a smooth application experience when upgrading to IDM 5.0.0, please make sure the following INDS Data Manager supported URLs are whitelisted prior to using the application:

- https://authn.honeywellaerospace.com
- https://aero.api.honeywellaerospace.com
- https://aerospace6.honeywellaerospace.com

- https://provision.signs.honeywellaerospace.com
- https://subsetting.honeywellaerospace.com

Security Issue Reporting: Instructions for reporting security-related issues can be found in the link https://www.honeywell.com/us/en/product-security. Follow the instructions provided under Vulnerability Reporting.

New Target Computer Requirements: The updated system requirements for hosting the software are included in the accompanying documentation. Please review section 12 “Security Information” in the “INDS Data Manager User Guide” to ensure compliance.
